Guarantee safe, remanufactured fire extinguishers with the **BSI Kitemark™ Scheme**

Deliver assurance when safety matters most. Be both sustainable and safe with quality-assured remanufactured fire extinguishers verified by the BSI Kitemark.

Why Remanufacturing?

Remanufacture is a new term for the fire industry and it differentiates varying activities that are currently undertaken under the refurbishing banner. In accordance with BS 8887: To remanufacture is to return a used product to its original performance with a warranty that is equivalent to, or better than, that of the newly manufactured product. Reconditioning is a less stringent approach returning a used product to a satisfactory working condition only. This might present a cheaper alternative using second-hand parts and can often meet lower expectations accepted by the buyer. With varying levels of process in the industry the two terms are useful to differentiate..

The different levels of quality

In the case of fire extinguishers, lower quality processes might include stripping used items of existing branding and put back on the market as a cheap equivalent. Remanufactured fire extinguishers are committed to producing high-quality products, verified to protect life in accordance with the original type approval. BSI Kitemark is only awarded for equipment that has been remanufactured and has pressure safety certification. We would like to help identify these on the market by enabling them to gain Kitemark™ Certified Remanufacturer award

Inspiring trust for a more resilient world

Why the BSI Kitemark?

The BSI Kitemark inspires trust and confidence when it matters the most. Products or services can be instantly recognizable as a product of quality, safety and trust. BSI Kitemark for fire extinguishers proves products have been remanufactured according to British standard BS 8887, so you can assure your customers your product is meeting consistently high-quality safety and security standards.
