Prioritizing your people's

health and safety

"Health, safety, and well-being are part of BSI's DNA. BSI brought together (convened) the experts that developed the first guide on occupational health and safety management, BS 8800. This then became BS OHSAS 18001 which was the foundation for the first international occupational health and safety management system – ISO 45001."

● Overview

ISO 45001, is the world's first Occupational Health & Safety (OH&S) management system ISO standard. Its focus on risk prevention, innovation and continual improvement will benefit organizations with the foresight to achieve this global standard through improved organizational resilience. As well as increasing employee engagement and publicly demonstrating commitment to sustainable work by providing safe and healthy workplaces, this standard focuses on key business challenges such as the supply chain and continuity planning. This allows organizations to anticipate, adapt and respond, providing both resilience and agility in a global marketplace.

● The benefits of using ISO 45001

Organizations with effective health and safety management systems are equipped to:

- Unlock high levels of **discretionary effort**
- Enjoy **higher performance levels** and **enhanced productivity**
- Benefit from **strengthened recruitment, diversity, engagement, and retention**
- **Reduce costs** and **improve compliance**
- **Create an authentic culture of trust and work engagement**
- **Adapt to the future of work**

For the individual, the benefits are equally clear. They enjoy a safe, healthy work environment, carrying out fulfilling tasks supported by effective working relationships. Effective health and safety management is an important part of an organization's well-being activities as it promotes a safe and healthy workplace.

Commitment to management standards is proven to deliver real business benefits. BSI clients who have adopted an OH&S management system tell us they benefit in the following ways*:

● Leadership and empowerment

ISO 45001 allows leaders of an organization to show their **commitment to safe and healthy workplaces** in a way that hasn't been seen before and allows organizations which truly **put their people first** to demonstrate this by **integrating broader wellness/well-being agendas** into their management system. At the same time, ISO 45001 recognizes the value created by an **actively engaged and empowered workforce**.

● Bringing health and safety and continuous improvement into the heart of your business

ISO 45001 is an opportunity for organizations to **align their strategic direction** with their OH&S management system and **increase focus on improving occupational health and safety performance**. Being recognized globally, the standard will ensure that your customers will understand how OH&S is managed across the business.

Using standards can offer a set of powerful business and marketing tools for organizations of all sizes. You can use them to fine-tune your performance and manage the risks you face while operating in more efficient and sustainable ways; they'll allow you to demonstrate the quality of what you do to your customers, and they help you to see how to embed best-practice into your organization.

ISO 45001 and its alignment to the United Nations Sustainable Development Goals (SDGs) sends a powerful message to shareholders and stakeholders – including employees – that organizations truly prioritize their people.

ISO 45001 contributes to UN SDG Goal 3 on good health and well-being, Goal 5 on gender equality, Goal 8 on decent work and economic growth, Goal 9 on industry, innovation and infrastructure, Goal 10 on reducing inequalities, Goal 11 on sustainable cities and communities and Goal 16 on peace, justice and strong institutions.

● Harvard Business School

New research by the Harvard Business School analysed proprietary certification data from some of the world's largest certification companies and injury microdata from the U.S. Bureau of Labor Statistics. It is the first study to directly examine the effects of the health and safety management standards on establishment-level health and safety performance using injury and illness data.

The study finds that:

- Establishments certified do indeed tend to be safer workplaces.
- Certification reduces the total number of illness and injury by 20 percent, and the number of illness and injury cases associated with job transfers or restrictions by 24 percent.
- Evidence that it also reduces the most severe injuries and illnesses—those that lead to days away from work—by a similar magnitude
