ISO 45001:2018 Requirements and Implementation training course

Essential information about the course

Level 

ISO 45001 is the world's first ISO management system standard for Occupational Health and Safety (OH&S). Its focus on risk prevention, innovation and continual improvement will benefit organizations with the foresight to achieve this global standard through increased organizational resilience. Suitable for organizations large or small and in any industry, it will replace the widely implemented BS OHSAS 18001.

If you're new to ISO 45001 and will be involved in the planning, implementing or supervising of an Occupational Health and Safety management system (OH&S MS) then this course is for you. You will identify the key requirements and benefits to manage risks and opportunities. This course will cover the history and development of ISO 45001, key terms and definitions and the ISO standardized high level structure. Using a step-by-step approach you will learn how to

develop an implementation plan, create necessary documentation, and monitor your OH&S MS to achieve continual health and safety improvement. It will also help you to recognize a typical framework for implementing the standard using the Plan Do Check Act (PDCA) cycle.

Combining our ISO 45001 requirements and implementation course, over three days, this course provides an in depth understanding of the standard and best practice implementation methods. The three-day course is packed with practical activities, group discussion and classroom learning to help you retain the knowledge to implement an effective management system. Our expert tutors will make sure you complete the course feeling confident that you can apply your new knowledge as soon as you step back inside your organization.

Upon successful completion of your course, you'll receive an internationally recognized BSI certificate.

Please note: this course includes the content of our ISO 45001 Requirements and our ISO 45001 Implementation training course, and so delegates do not need to attend these programmes

ISO 45001:2018 Requirements and Implementation training course

Online exam available

Validate your learning for free with an optional end of course assessment. You can then receive a training certificate of achievement.
