BSI is ASI Accredited (ASI-ACC-067) to conduct RSPO assessment since 31/10/2014 with accredited office located at Kuala Lumpur, Malaysia.

### 2.1 Assessment Methodology, Programme, Site Visits

The on-site assessment was conducted on **12/06/2023 – 15/06/2023**. The audit programme is included as Section 2.3.

The approach to the audit was to treat the mill and supply base as an RSPO Certification Unit. A range of occupational health and safety, environmental, best practice management, and social factors were covered. This includes consideration of topography, palm age, proximity to areas with HCVs, declared conservation areas, local communities engagement and workers welfare and safety.

The Critical NC close out on-site assessment was conducted on **21/08/2023**. The audit programs are included in Section 2.3.

The methodology for collection of objective evidence included physical site inspections, observation of tasks and processes, interviews of staff, workers and their families and external stakeholders, review of documentation and monitoring data. Malaysia National Interpretation 2019 of the RSPO P&C 2018 was used as the normative reference to assess compliance. The comments made by external stakeholders were also taken into account in the assessment.

The minimum sample size is four estates. Sample size for certification unit with more than four (4) estates were determined based on formula  $N = (\sqrt{y}) \times (z)$  where y is the number of estates and where z is the multiplier defined by risk assessment. While, the sampling of smallholders were based on the formula  $(\sqrt{y}) \times (z)$ ; where y is total number of group member and where z is the multiplier defined by the risk assessment. The sampled smallholder listed in Appendix E.

Meetings were held with stakeholders to seek their views on the performance of the company with respect to the RSPO requirements and aspects where they considered that improvements could be made. At the start of each meeting, the interviewer explained the purpose of the audit followed by an evaluation of the relationship between the stakeholder and the company before discussions proceeded. The interviewer recorded comments made by stakeholders and these have been incorporated into the assessment findings.

Structured worker interviews with male and female workers and staff were held in private at the workplace in the mill and the estates. Fieldworkers were interviewed informally in small groups in the field. In addition, the wives of workers and staff were interviewed in informal group meetings at their housing. Separate visits were made to each of the local communities to meet with the village head and residents. Company officials were not present at any of the internal or external stakeholder interviews. A list of Stakeholders contacted is included as Section 3.4.

The non-conformities for this audit are detailed in Section 3.3 and unless it is stated in this section, all previous nonconformities including minor nonconformities are remains closed.

**RSPO P&C Public Summary Report**  
**Revision 14 (Aug 2022)**

This report is structured to provide a summary of assessment finding as provided in Appendix A. The assessment was conducted based on risk based approach sampling and therefore nonconformities may exist.

For Initial, Re-certification and Extension of Scope assessment, the report was externally reviewed by approved external peer reviewer prior to certification decision by BSI.

For Annual surveillance assessment, the report was internally reviewed and approved by BSI qualified certification reviewer.

**Principle 7: Protect, conserve and enhance ecosystems and the environment**

**Criterion 7.1:** Pests, diseases, weeds and invasive introduced species are effectively managed using appropriate Integrated Pest Management (IPM) techniques.

7.1.1	<b>(C)</b> IPM plans are implemented and monitored to ensure effective pest control. - Critical (Major) compliance -	IPM is documented in Agriculture Reference Manual. The estates continue to implement biological control for the oil palm pest in the plantation such as leaf eating pest and rat. IPM techniques applied at the estates include monitoring of pest numbers and the use of triggers for initiation of control measures. Although there have been no outbreaks of leaf eating pests, beneficial plants are being established along roadsides to attract natural predators.  There are several IPM available as per IPM plan in Lambak estate as per below:-  Rat – To install the barn owl box base on requirement 1box:10ha. As per to date the barn owl box was in progress to achieve the target as per budget for FY 2023 verified. The below was status of barn owl box status.	Complied

		Lambak	Elaeis	105	123	82%	
		Elaeis	Central	116	136	59%	
			Ellar	27	75	19%	
		Beneficial plants such as <i>Turnera subulata</i> and <i>Cassia cobanensis</i> are grown in the estate and their records of planting in new areas and maintenance of existing areas of beneficial plants and location maps are available. Leaf-eating pest census was regularly carried out to obtain information about threshold level and action to be taken thereafter. Census records were available for verification which has shown the effectiveness of the planting of beneficial plants to reduce the leaf eating caterpillars.					
7.1.2	Species referenced in the Global Invasive Species Database and CABI.org are not to be used in managed areas, unless plans to prevent and monitor their spread are implemented. - Minor compliance -	None of species were referenced in the Global Invasive Species Database and CABI.org are used in the management of IPM. This is not practiced in the estates visited.					Complied
7.1.3	There is no use of fire for pest control unless in exceptional circumstances such as plantation sanitation, i.e. where no other effective methods exist, and with prior approval of government authorities. - Minor compliance -	Interview with the estate management and workers indicated that there was no use of fire as pest control in the estates. Visit around the estate also indicated that there was no evidence of fire being used as the methods of pest control is mainly via pesticide applications and biological controls (IPM).					Complied
<b>Criterion 7.2:</b> Pesticides are used in ways that do not endanger health of workers, families, communities or the environment.							
7.2.1	<b>(C)</b> Justification of all pesticides used is demonstrated. Selective products and application methods that are specific to the target pest, weed or disease are prioritised. - Critical (Major) compliance -	The written justification in Standard Operating Procedure (SOP) of all agrochemicals are available the Agricultural Reference Manual (ARM), SOP and in the Safety Pictorial Book prepared by Sime Darby Plantation Berhad. 7.12.6	All rare, threatened or endangered (RTE) species are protected, whether or not they are identified in an HCV assessment. A programme to regularly educate the workforce about the status of RTE species is in place. Appropriate disciplinary measures are taken and documented in accordance with company rules and national law if any individual working for the company is found to capture, harm, collect, trade, possess or kill these species. - Minor compliance -	Based on the biodiversity report, there was no RTE species found in all the estates. Nonetheless, the monitoring plan of wildlife was established and implemented. Education about the status of RTE has been given to workforce through a muster briefing from time to time. Signage to restrict hunting and intrusion have been put up at many places at the estates especially at the points of entry to create awareness among the workers and surrounding communities.	Complied
7.12.7	The status of HCVs, HCS forests after 15 November 2018, other natural ecosystems, peatland conservation areas and RTE species is monitored. Outcomes of this monitoring are fed back into the management plan. - Minor compliance -	Educational activities on RTE species were done through a few means such as briefings/training and no hunting signage. Interview with workers showed that they have a good understanding in the restriction of hunting or endangering the RTE species.
