

ISO 45001

Occupational health and safety management for the built environment

ISO 45001 is the internationally recognized management system standard for Occupational Health and Safety (OH&S). It was created to address the need to provide a consistent global framework, focussed on proactive prevention of injury and ill-health whilst providing an environment which is safe and healthy.

With its focus on strategic risk management, contractor management and looking after the mental, as well as physical health of workers, it is clear that ISO 45001 provides an excellent framework to support organizations within the built environment whatever services are provided across the asset lifecycle (design, build, operate or decommission).

Added to that, the enhanced focus on statutory and regulatory compliance and alignment to the ISO high level structure makes ISO 45001 a perfect partner to quality, environmental and information security management system standards.

Take for instance ISO 9001 (quality management); ISO 45001 is one way organizations can demonstrate conformance to the personal safety aspects of clause 7.1.4 'Environment for the operation process' but the relationship with ISO 9001 goes much further than that.

Effective occupational health and safety is a key component of corporate responsibility, whilst ISO 45001's strong focus on legal and other requirements supports the regulatory focus within ISO 9001. Both standards also recognize the role human performance and error can have on the outcomes of the systems.

Finally, the requirement in ISO 45001 to align OH&S to the strategic direction of the business, driven by top management and to accelerate continual improvement, illustrates that the relationship between ISO 9001 and ISO 45001 goes well beyond a single clause.

Having complimentary management systems allows organizations to anticipate, adapt and respond to the risks and opportunities created by the highly competitive, innovative built environment sector. This provides organizations, large and small, with the resiliency and agility needed to thrive whether in global or local markets.

How can ISO 45001 benefit your organization?

A poor safety record can damage your business, affect employee morale and productivity, reduce revenue and impact upon quality and customers. It can tarnish your company's brand and reputation—potentially to the point where it erodes client trust for those you supply.

Added to that, organizations are now looking for ways to help them think beyond safety and accident prevention. Effective health management is a core part of ISO 45001, focussing on not just physical but mental and cognitive health too. ISO 45001 also encourages a more holistic approach, recognizing that linking with broader wellbeing initiatives can bring even greater benefits.

Being an employer who cares about the wellbeing of their employees is something that's considered particularly important by millennials who have been brought up surrounded by messages of the importance of health and wellbeing and expect similar support from their employer. In a competitive sector such as the built environment, where there are recognized skills shortages, attracting the best young talent is vital, and ISO 45001 offers a framework to enhance your recruitment and retention strategy.

Proactively managing occupational health and safety in this way will help you better protect your people, brand and business performance.

Health and Safety innovation in the built environment

With the adoption of new technology brings great opportunities to help drive continual improvement, a key part of ISO 45001.

The use of exoskeletons, to reduce musculoskeletal stress associated with heavy lifting, repetitive actions or sustained awkward postures presents a great opportunity to reduce the social and economic burden such disorders present the industry.

Exoskeletons 'take over' or support muscle function, so that the muscles do not have to work as hard, reducing muscle fatigue and potential injuries. These are being trialled in a range of construction and manufacturing environments.

Whilst exoskeletons are forms of personal protective equipment (PPE) and therefore are at the bottom of the 'hierarchy of controls' (organizations should aim to use controls from the top), it does demonstrate that strides to adopt technology can improve safety and health.

Digital technology is also driving change. Information models can be used to identify, structure and share information relating to risks. This is being driven by the rapid adoption of Building Information Modelling (BIM) and with it the use of 3D and construction sequence (4D) modelling. This has significant implications for health and safety, reinforced by the development of PAS 1192-6 - the specification for collaborative sharing and use of structured Health & Safety information using BIM, published by BSI.

What am I missing if I don't implement ISO 45001?

By not implementing ISO 45001 you are missing out some important opportunities and benefits, including:

- Protecting the workforce including the supply chain (if you manage one)
- Demonstrating compliance
- Bidding on contracts, especially internationally
- Demonstrating commitment to the United Nations Sustainable Development Goals
- Attracting and retaining talent
- Enhancing workplace health and wellbeing
- Enhancing and protecting your organization's reputation
- And of course, providing a safe and healthy workplace free from injury and disease

For those organizations operating or trading internationally, working to ISO 45001 (the single international standard on OH&S) simplifies trade across boundaries; geographic, political, economic, commercial or social. Simplification and standardization can give you that competitive edge in the market.

What steps do I need to take?

You'll already be complying with health and safety legislation so you have some of the basics covered. If you have ISO 9001, or other ISO management systems standard following the same High Level Structure, you have many of the processes in place as well, you'll just need to update them for ISO 45001.

Organizations wishing to upgrade to ISO 45001 are recommended to take the following actions:

- Purchase a copy of the ISO 45001 standard and the supporting guidance - BS 45002.0
- Complete a gap assessment to help you prioritize actions (we can help you with this)
- Book ISO 45001 training with us
- Gain certification and celebrate by displaying the BSI Mark of Trust

Health and Safety is part of our DNA

BSI is the world leader in occupational health and safety management systems. We were the originators of the first guide on occupational health and safety in 1996 which laid the foundation for OHSAS 18001, the standard on which the world's first global occupational health and safety management system – ISO 45001 was built.

We continue to work with global experts in this field, most notably in our management and leadership of the ISO Technical Committee (as Secretariat of Committee 283), which develops new standards and supporting materials on occupational health and safety. This expertise is carried through to our extensive training programmes, helping staff at all levels.

We are also the world leader in ensuring that safety products meet the highest standards of quality. The BSI Kitemark is recognized globally as the defining mark of trust for construction products, safety equipment including personal protective

equipment, fire detection and suppression and gas and electrical products. Clients all over the world use it to differentiate their products and as a passport to new markets. Procurement teams specify BSI Kitemark approved products to keep people safe.

The power of the BSI Kitemark extends beyond the testing of products. Our mark of trust, is also available to those organizations that are using Building Information Modelling (BIM), including the international standard ISO 19650 for managing information over the whole lifecycle of an asset, and the specification for collaborative sharing and use of structured Health and Safety information using BIM (PAS 1192-6). This can be used as evidence to support your ISO 45001 assessment.

We harness knowledge and expertise to help support organizations of all sizes, across all sectors worldwide to develop their health, safety and wellbeing programmes and safety products.

BSI/NZ/1690/PC/12/19/EN/GRP

Driving business improvement and organizational resilience

We partner with our clients to enable them to become more resilient and embed a culture of trust in workplace health and safety in organizations of all sizes worldwide.

Our history

Established in 1901, today we work with over 84,000 clients each year across 193 countries.

Our people

The expertise, passion and experience of our people are at the heart of what we do. This allows us to deliver excellence, enabling you to grow and prosper.

Our clients

BSI works with leading organizations globally; 84% of the FTSE 100, 50% of the Fortune 500, 81% of the Nikkei listed companies as well as thousands of SMEs.
